revista 85 Acero Inoxidable

The effective transport of materials has always been an important factor in the logistics of any international company. Due to the high content that can be transported on each trip, the price and delivery times, maritime transport is one of the most frequently used.

We cannot forget that both the ship and the elements that conform it, such as refrigerated containers or scrubbers, must face different types of corrosions, chemicals, possible shocks and pressures.

Using stainless steel in these applications reinforces safety, increases the useful life of the boats and equipment, generates savings in

maintenance costs and is extremely easy to clean, which speeds up the unloading and loading time of new goods.

To learn more about complete solutions for offshore fish processing, read our magazine 85. You can find an article about "Machinery for fish, seafood and cephalopod processing" that may interest you [Magazine 85](#) [ /export/sites/cedinox/.galleries/revistas/Revista85-digital.pdf ]
